

Cyltezo

Qatar · access guide

How to access Cyltezo (Humira biosimilar) from Qatar: 2026 pathway via HMC adult specialty, Sidra paediatric, and private clinics | Reserve Meds

By Reserve Meds clinical & regulatory team. Last reviewed 2026-05-20.

Qatar treats adalimumab populations across rheumatology, dermatology, gastroenterology, ophthalmology at HMC adult specialties and Sidra Medicine paediatric. The 2026 question for Humira patients is whether to switch to Cyltezo, the FDA interchangeable biosimilar.

Why Cyltezo, why now

Cyltezo (adalimumab-adbm) was FDA-designated interchangeable with Humira in October 2021. Same indications as reference Humira: RA, JIA (4+), AS, PsA, plaque psoriasis (adult and paediatric 6+), CD (adult and paediatric 6+), UC (adult and paediatric 5+), HS (adult and paediatric 12+), uveitis. SC every other week.

Reserve Meds does not promote one TNF biosimilar over another or over the reference biologic. Other Humira biosimilars include Amjevita, Hyrimoz, Hadlima, Yusimry, and others.

What Cyltezo is, in plain language

SC adalimumab biosimilar pen or pre-filled syringe, every other week after training. Onset gradual (4-12 weeks). Interchangeable with Humira per FDA designation.

Eligibility at a Qatar specialty clinic

Treating specialist confirms indication, screens for hepatitis B, latent TB, active infection. Pregnancy plan documented. Live vaccines updated before initiation. Paediatric indications managed at Sidra Medicine; adult at HMC adult specialty.

The Qatar prescribing and supply picture

Cyltezo MoPH registration status is variable. Where not yet registered, access is via MoPH named-patient personal-import through HMC or Sidra pharmacy. Reserve Meds coordinates the import file, prescription chain, and cold-chain shipping.

Cost band

USD 40K-60K annual per patient (QAR 145K-220K), lower than reference Humira. MoPH coverage under chronic-disease formulary for Qatari nationals; private insurance pre-authorisation required.

What to expect, week-by-week

Weeks 0 to 2: confirm indication, screen TB and hepatitis B, prescription, MoPH filing. Weeks 2 to 4: shipment, clinic-supervised injection 1-2 sessions, training. Weeks 4 to 12: every-other-week SC; partial response week 4, fuller week 12. Month 6 and 12: full reassessment per indication.

When Cyltezo is the wrong drug

Active untreated TB or hepatitis B reactivation risk: treat first. NYHA III-IV heart failure: contraindicated. Demyelinating disease: caution. Active malignancy: contraindicated. Non-response or anti-drug antibodies on prior adalimumab: consider alternative class. Reserve Meds does not promote one TNF biosimilar over another or over the reference biologic.

Closing

Reserve Meds runs the Cyltezo supply file from the HMC adult or Sidra paediatric specialty referral through MoPH registration or named-patient pathway and delivered cold-chain supply. Clinical decisions remain with your treating specialist.

Reserve Meds's role

US-based concierge coordinator for cross-border specialty medicine. We are not the prescriber, not the dispensing pharmacy, and not the manufacturer. All clinical decisions remain with your treating physician.
