How to access Lynparza from Oman, the named-patient import pathway, 2026

By Reserve Meds · Clinical & regulatory team · Last reviewed 2026-04-23

An Omani patient diagnosed with BRCA-mutated advanced ovarian cancer or HER2-negative BRCA-mutated advanced breast cancer may receive a prescription for Lynparza (olaparib) from their treating medical oncologist, after germline or somatic BRCA testing confirms the mutation. Lynparza is FDA-approved in the United States across several PARP-responsive indications. In Oman, Lynparza may not be uniformly stocked across tertiary oncology pharmacies, which is why your oncologist may be coordinating a named-patient import pathway on your behalf.

This guide explains the legal pathway, what documentation your physician needs, typical timing and cost bands, and where Reserve Meds fits in.

The clinical situation

Lynparza is an oral poly (ADP-ribose) polymerase (PARP) inhibitor. Eligibility typically requires molecular confirmation of a BRCA1/2 mutation (or, in some indications, homologous recombination deficiency). The manufacturer is AstraZeneca (with a co-commercialisation arrangement with MSD). Dosing is typically 300 mg orally twice daily as continuous therapy. Monitoring includes complete blood count (anaemia, neutropenia, thrombocytopenia), renal function, and rare but serious myelodysplastic syndrome / acute myeloid leukaemia surveillance. Your oncologist will confirm BRCA status and sequencing against your overall treatment plan.

Is Lynparza legally importable into Oman?

Yes, through the Directorate General of Pharmaceutical Affairs and Drug Control (DGPADC) named-patient import framework, administered via the administering hospital's importing pharmacy and the DGPADC Central Administration of Pharmaceutical Affairs. The Oman has a mature named-patient mechanism that supports cross-border access to specialised oncology products.

The framework rests on four anchors: (a) the medicine is approved by a recognised reference authority (FDA qualifies), (b) no clinically equivalent locally registered alternative is suitable for the patient, (c) the treating physician takes clinical responsibility for use, and (d) the importing party documents chain of custody from the US source to the administering facility. Applications are typically filed by the tertiary centre's importing pharmacy on the physician's behalf.

How the pathway works, step by step

1. **Consultation with your treating oncologist.** The decision to prescribe Lynparza is clinical, based on BRCA status, tumour type, and treatment line. Your oncologist documents the rationale.
2. **Administering facility identification.** An Omani tertiary oncology centre with an importing pharmacy files on behalf of the physician.
3. **DGPADC named-patient application.** Your physician or the hospital's importing pharmacy files an application with DGPADC including clinical rationale, patient identifier, product details, and chain-of-custody plan.
4. **US-side sourcing.** Reserve Meds coordinates with our US-licensed specialty wholesale partner to secure product from the manufacturer's authorised distribution chain under DSCSA.
5. **Temperature-controlled shipment.** Lynparza is a stable oral tablet; shipments travel with tamper-evident packaging and end-to-end documentation.
6. **Arrival and dispensing support.** Your oncologist remains the treating clinician. Reserve Meds coordinates re-supply ahead of cycle end to avoid treatment gaps.

What documentation your physician needs

Your physician will typically need to provide:

- A clinical rationale letter confirming BRCA status, tumour type, prior therapies, and Lynparza as the indicated treatment
- Verification of their Omani medical licence (MOH / Omani Medical Syndicate)
- A current prescription naming the product, strength, and quantity
- Patient identifier (anonymised reference preferred)
- The planned treatment cadence (continuous twice-daily therapy with monthly re-supply)

Reserve Meds provides a physician documentation kit bundling the templates DGPADC reviewers expect to see for oncology oral therapies under named-patient import.

Costs and timing

Lynparza's US cash-pay drug-only reference price for a 30-day supply sits in an indicative 2026 drug-only range (delivered quote issued at intake) of roughly USD 15,000-17,000. Logistics, DGPADC documentation handling, and concierge coordination add incremental cost; Reserve Meds issues a full transparent quote at the start of intake.

Indicative timing for first shipment arrival after cohort intake opens is 7-14 days from the moment a complete DGPADC application is submitted. Subsequent re-supply cycles are generally faster once the pathway is established.

Fulfillment availability is limited to our first cohort, and all timelines published on this site are indicative. If your clinical situation is time-sensitive, tell us at intake. We triage accordingly.

Reserve Meds's role

Reserve Meds is a US-based concierge coordinator for cross-border specialty medicine. For Lynparza specifically, we provide:

- **Sourcing.** Through our US-licensed specialty wholesale partner, operating under DSCSA chain-of-custody.
- **Documentation.** Regulatory documentation package for your physician and for DGPADC review.
- **Logistics.** Temperature-stable shipment and chain-of-custody coordination.
- **Concierge case lead.** A named point of contact for your family and your physician throughout the process.

What we do not do: we are not the prescriber, we do not practise medicine, and we are not the dispensing pharmacy. All clinical decisions remain with your treating oncologist.

Frequently asked

Is this legal in Oman? Yes, when executed through the DGPADC named-patient framework with appropriate documentation. The pathway has been used routinely across oncology for many years. See our trust and compliance page.

Is BRCA testing available in Oman? Yes, several accredited labs in Oman perform germline and somatic BRCA testing; your oncologist will confirm which lab is handling your report.

What if my oncologist has not done this before? Named-patient import is an institutional process your oncologist's hospital will have encountered. Our documentation kit closes the gap for first-time applicants.

Will private insurance cover this? Cash-pay is the default. Some Omani private insurers reimburse named-patient imports on case-by-case approval; we supply documentation for your submission but do not process insurance claims directly.

Reserve Meds's role

US-based concierge coordinator for cross-border specialty medicine. We are not the prescriber, not the dispensing pharmacy, and not the manufacturer. All clinical decisions remain with your treating physician.

Reserve Meds

reserved for you.
