Qalsody access in the UAE: the EDE named-patient pathway

Last reviewed 2026-05-16 by Reserve Meds clinical and regulatory team.

Quick orientation

Qalsody (tofersen) is a antisense oligonucleotide targeting SOD1 mRNA developed by Biogen and Ionis Pharmaceuticals. It is approved by the US FDA for SOD1-mutant amyotrophic lateral sclerosis (accelerated approval based on neurofilament reduction). The standard regimen is 100 mg intrathecal injection over 1-3 minutes, three loading doses 14 days apart then every 28 days. Qalsody is available in the global pharmaceutical supply chain in 100 mg per 15 mL intrathecal solution. The drug may or may not be locally registered in UAE, and even when registered, a UAE family asking for Qalsody is often asking for a precise version of it (specific indication, specific presentation, specific schedule) that the local market has not caught up to. Reserve Meds coordinates the US-side sourcing, the validated cold-chain logistics, and the documentation packet your physician needs.

Why UAE patients need Qalsody through the named-patient pathway

As of 29 December 2025, under Federal Decree-Law No. 38 of 2024, the newly established Emirates Drug Establishment (EDE) assumed 44 core services from MOHAP, including marketing authorisations and personal-use import permits. The federal pathway for a UAE-licensed physician to obtain a medicine not registered or stocked locally is the unregistered-medicine import permit, historically administered by MOHAP and now administered through the EDE portal at ede.gov.ae.

Several patterns drive these cases: indication lag against the FDA label; biomarker-driven prescribing where the local stock has not caught up; payer denials on newer-line indications; and weight-banded or schedule-specific presentations the local agent does not reliably carry. For Qalsody specifically, the named-patient pathway exists to handle exactly the situations the local registered route cannot: a newer FDA indication that has not yet propagated to UAE labeling, a presentation or strength the local agent does not reliably carry, a payer denial that is uneconomic to appeal, or a biomarker-defined regimen where the prescriber's clinical judgement runs ahead of the local label's molecular language. In each pattern, the named-patient pathway is the mechanism that connects a UAE-licensed physician's clinical decision with US-sourced, FDA-labeled Qalsody for a specific patient.

Qalsody (FDA April 2023, accelerated approval) is the first ASO targeting a specific genetic cause of ALS (SOD1 mutation). It is the only FDA-approved therapy for SOD1-mutant ALS. Local registration is essentially limited, and families coordinating cross-border supply also coordinate intrathecal administration at a specialist neurology centre.

The EDE named-patient pathway for Qalsody

A complete application typically includes a clinical justification letter from the treating physician (diagnosis, severity or stage, prior therapies, biomarker results where relevant, why Qalsody is appropriate, why the locally available alternative is not suitable for this case); the treating physician's UAE license verification (issued by MOHAP, DHA, DOH, or Sharjah Health Authority); an anonymised patient identifier where the regulator submission allows; full product details (brand name Qalsody, generic tofersen, manufacturer Biogen and Ionis Pharmaceuticals, strength 100 mg per 15 mL intrathecal solution, quantity requested calibrated to the planned cycles or treatment duration); the destination dispensing facility name, license number, and pharmacy in charge; and a chain-of-custody plan describing how the medicine will move from the US manufacturer through the importer to the dispensing pharmacy, including cold-chain handling at 2 to 8 degrees Celsius from the US manufacturer through to the dispensing pharmacy.

For Qalsody, the clinical justification typically rests on documentation of confirmed SOD1 gene mutation; CSF neurofilament light chain as pharmacodynamic marker where applicable, line of therapy and prior treatments, and a clear statement of why this medicine is the appropriate next step in this patient's care.

Approval timelines for routine cases are typically 5 to 15 business days from a complete filing. Complex cases (rare indication, paediatric application, larger multi-cycle quantities, gene therapy or cell therapy logistics, first-import scrutiny on a presentation new to the local route) can extend to 4 to 6 weeks. The EDE retains discretion on timing, and we do not promise specific durations.

Where Qalsody gets dispensed in UAE

A small group of UAE institutions handle named-patient imports as established workflow, with in-house import pharmacy infrastructure and physicians experienced with the application set. Tertiary and major private hospitals that fit this profile include Cleveland Clinic Abu Dhabi on Al Maryah Island (M42 group), Sheikh Khalifa Medical City in Abu Dhabi (SEHA-network 586-bed JCI-accredited), Tawam Hospital in Al Ain (SEHA referral centre), Burjeel Medical City in Mohammed Bin Zayed City, American Hospital Dubai (Mayo Clinic Care Network member), King's College Hospital London Dubai, Mediclinic City Hospital in Dubai Healthcare City, and the larger NMC Healthcare sites across Abu Dhabi, Dubai, Sharjah, and Al Ain.

For physicians at smaller hospitals without internal import infrastructure, the common pattern is to route through a Abu Dhabi, Dubai, Sharjah, and Al Ain-based specialty importer that holds a pharmaceutical establishment license and files the EDE application on the prescribing physician's behalf. The medicine then moves into the prescribing hospital's pharmacy under chain-of-custody documentation, where the patient receives the infusion under standard hospital or day-care nursing supervision.

Real cost picture for Qalsody in UAE

US WAC for Qalsody is approximately USD 14,000 per vial, which translates to approximately USD 182,000 per year. The UAE dirham is pegged to the US dollar at approximately 3.67 AED to 1 USD, so the annual reference range converts accordingly when expressed in AED at US WAC equivalents.

International validated cold-chain logistics typically run USD 400 to USD 1,500 (approximately AED 1,500 to AED 5,500) per shipment depending on destination city, urgency, and pack size. UAE customs and EDE permit fees are nominal relative to drug cost. Reserve Meds' concierge fee is itemised separately on every firm quote.

On the insurance side, each UAE insurer assesses named-patient imports case by case. Local payer cover is administered through Daman, Thiqa (administered by Daman, government-funded for UAE nationals), GIG Gulf (formerly AXA Gulf), Sukoon (formerly Oman Insurance Company), ADNIC, and Orient. We do not promise coverage from any insurer. The US manufacturer copay programmes and patient assistance programs do not extend internationally; cross-border patients pay cash or rely on local payer coverage where it applies.

Clinical evidence behind Qalsody

Qalsody's pivotal VALOR (SOD1-ALS) showed reduction in CSF SOD1 protein and CSF neurofilament light chain, with delayed clinical decline in pre-specified subgroups. The accelerated approval is based on the neurofilament biomarker surrogate.

Typical timeline for Qalsody in UAE

EDE routine processing is typically 5 to 15 business days from a complete filing. For Qalsody specifically, cold-chain shipment adds 2 to 3 days versus an ambient small molecule because validated thermal packaging, continuous temperature monitoring, and customs clearance scheduled to avoid extreme-heat exposure are non-negotiable. End-to-end, most cases complete within 3 to 6 weeks from first complete documentation to dispensing or first dose. For longer treatment courses, we coordinate cycle-by-cycle or quarterly resupply so the patient never approaches an empty pharmacy shelf.

What your physician needs to provide

For a UAE-licensed physician prescribing Qalsody through the EDE pathway, the clinical justification letter is the cornerstone of the application. The letter typically documents the patient's diagnosis with relevant staging or severity language for the indication, the prior therapy history, the rationale for Qalsody as the appropriate next step, and the precise FDA-labeled regimen (dose, route, frequency, expected duration). For Qalsody specifically, the FDA-approved regimen is 100 mg intrathecal injection over 1-3 minutes, three loading doses 14 days apart then every 28 days.

For Qalsody, the relevant molecular or laboratory documentation includes confirmed SOD1 gene mutation; CSF neurofilament light chain as pharmacodynamic marker. The letter references the test results that establish the patient's eligibility for the FDA-labeled indication. The treating physician's UAE license number, the dispensing facility license number, and the pharmacy in charge complete the package. Monitoring requirements relevant to Qalsody (baseline labs, imaging cadence, adverse-event surveillance) are stated in the letter and operationalised by the prescribing physician's team.

Monitoring for Qalsody: Confirmed SOD1 mutation pre-treatment, CSF neurofilament light chain as a pharmacodynamic surrogate biomarker, periodic ALSFRS-R, slow vital capacity, and respiratory function, lumbar puncture procedural safety. **Adverse-event profile:** Pain, fatigue, joint pain, increased CSF white blood cell count, myelitis and radiculitis, increased intracranial pressure (papilloedema described). Lumbar-puncture procedural complications. Standard ASO class considerations.

Common questions about Qalsody in UAE

Will my insurer cover this? Each UAE insurer (Daman, Thiqa (administered by Daman, government-funded for UAE nationals), GIG Gulf (formerly AXA Gulf), Sukoon (formerly Oman Insurance Company), ADNIC, and Orient) assesses named-patient imports case by case. We supply the documentation set that allows your insurer to assess the case; the claim itself sits with you or your hospital.

Is Qalsody already locally registered in UAE? Local registration status can shift over time; Qalsody may already be on the UAE register for some indications but not others, or the registered presentation may not match what the prescriber needs. The EDE pathway exists precisely to bridge these gaps and is the cleanest legal route when the local supply chain does not match the prescription.

What about competitors? Alternatives in the same therapeutic class include riluzole, edaravone (Radicava), AMX0035 (no longer marketed), other ASOs in development. Choice depends on the patient's full profile, prior therapy, biomarker status, and the prescriber's judgment. Reserve Meds coordinates whichever medicine the physician has prescribed.

How does the cold chain work? This medicine requires cold-chain handling at 2 to 8 degrees Celsius from manufacture through to dispensing. Reserve Meds uses validated thermal packaging with continuous temperature logging. Customs clearance is scheduled to avoid prolonged tarmac exposure. The cold chain is broken only at the dispensing pharmacy.

Will my US manufacturer assistance program help? US patient assistance programs (PAP), copay cards, and bridge programs from Merck, Pfizer, AstraZeneca, Lilly, Roche, Genentech, Novartis, AbbVie, Janssen, Gilead, Biogen, BMS, and other manufacturers are generally restricted to US residents with US prescriptions filled at US pharmacies. Cross-border patients pay cash or use local payer cover.

What if treatment is multi-year? For long-running treatment, we coordinate cycle-by-cycle or quarterly resupply through the same EDE pathway, with each shipment authorised against the same physician documentation set updated for the current cycle. Patients never need to navigate the supply chain themselves.

Where is the medicine actually administered? Infusion is administered at a hospital or day-care infusion suite under nursing supervision with vital-sign monitoring. The dispensing pharmacy releases the vial only to the infusion suite on the day of administration. Home administration is not appropriate for IV infusion of this product.

What if my physician is at a smaller clinic that does not import directly? The standard pattern is to route through a Abu Dhabi, Dubai, Sharjah, and Al Ain-based specialty importer that holds a pharmaceutical establishment license. The importer files the EDE application on behalf of the prescribing physician, takes delivery of the medicine, and transfers it under chain-of-custody to the prescribing facility's pharmacy.

Operational notes for the EDE workflow

Operationally, the EDE workflow rewards complete first-time submissions. The portal at ede.gov.ae expects the clinical justification letter, license verification, anonymised patient identifier, full product details, dispensing facility data, and chain-of-custody plan in a single packet. Common reasons for delay are missing pharmacy-in-charge license verification, incomplete vial-count math against the planned treatment duration, or chain-of-custody plans that do not specify continuous temperature logging where required. The dispensing facility's import pharmacy team typically owns the portal submission; the prescribing physician's role is the clinical justification letter.

Where Reserve Meds fits in Qalsody cases

Reserve Meds is a US-based concierge coordinator. We do not replace your prescribing physician, we do not replace the EDE, and we do not replace your dispensing pharmacy. For Qalsody specifically, we orchestrate the US-side sourcing through a DSCSA-compliant specialty channel, build the documentation packet your physician submits, coordinate validated cold-chain logistics with appropriate temperature monitoring into UAE, plan cycle-by-cycle resupply across longer treatment courses, and assign a single named coordinator through the case. Standard NPP coordination under our cold-chain biologic playbook applies.

Reserve Meds's role

US-based concierge coordinator for cross-border specialty medicine. We are not the prescriber, not the dispensing pharmacy, and not the manufacturer. All clinical decisions remain with your treating physician.

Reserve Meds

reserved for you.

Composite case examples. This document is for general information only and does not constitute medical advice. Please consult your treating physician.

Reserve Meds is in pre-launch. Published timelines and cost ranges are indicative, not guarantees.
