

Rezdiffra in the UAE

The MoHAP named-patient coordination pathway — indicative 2026

IMMUNOLOGY · MASH WITH MODERATE-ADVANCED FIBROSIS

The clinical situation

Rezdiffra (resmetirom) is an oral thyroid hormone receptor-beta selective agonist FDA-approved for adults with noncirrhotic metabolic dysfunction-associated steatohepatitis (MASH) with moderate to advanced liver fibrosis (F2 to F3), in conjunction with diet and exercise. Manufactured by Madrigal Pharmaceuticals. It is the first drug approved for MASH in the United States. Dosing is weight-based once daily (80 mg or 100 mg). Pre-treatment workup covers liver biopsy or validated non-invasive diagnostic, LFTs, TSH, and lipid panel per FDA labelling.

The pathway, 5 steps

- 1 Consultation & clinical rationale.** Your hepatologist documents MASH diagnosis, fibrosis stage (F2–F3), exclusion of cirrhosis, and Rezdiffra rationale.
- 2 Baseline workup.** LFTs, TSH, lipid panel, liver biopsy or non-invasive fibrosis staging per FDA labelling.
- 3 MoHAP named-patient application.** Physician or hospital pharmacy files clinical rationale, patient reference, fibrosis staging, and chain-of-custody commitment.
- 4 US-side sourcing & logistics.** Reserve Meds coordinates product through our US-licensed DSCSA-compliant specialty wholesale partner with controlled-ambient shipment.
- 5 Arrival & first dose.** Dispensing pharmacy releases the first 30-day supply; monthly refill cadence and LFT monitoring established.
