How to access Rituxan from Oman, the named-patient import pathway, 2026

By Reserve Meds, Clinical and regulatory team. Last reviewed 2026-05-13.

A Omani patient with CD20-positive non-Hodgkin lymphoma, chronic lymphocytic leukemia, rheumatoid arthritis in combination with methotrexate, granulomatosis with polyangiitis and microscopic polyangiitis, and pemphigus vulgaris may receive a prescription for Rituxan (rituximab) from their treating oncologist, hematologist, or rheumatologist depending on indication. Rituxan is FDA-approved in the United States and manufactured by Genentech and Biogen (Roche). It is a chimeric CD20-directed monoclonal antibody administered by intravenous infusion. Local availability of Rituxan in Oman can be inconsistent: the drug may not be on every specialty pharmacy's standing formulary, the specific indication may not match what is locally registered, or the strength required may be back-ordered. When that happens, a named-patient import pathway through DGPADC remains a legitimate route for the patient whose physician has already prescribed the drug.

This guide explains the pathway, the documentation your physician needs, typical costs and indicative timing, and where Reserve Meds fits in.

The clinical situation

Rituxan is a chimeric CD20-directed monoclonal antibody. Mechanism: a chimeric IgG1 monoclonal antibody that binds CD20 on B-cells and mediates B-cell depletion through antibody-dependent and complement-dependent mechanisms. Dosing: indication-specific dosing by intravenous infusion or, for Rituxan Hycela, subcutaneously after a first IV dose, per FDA labeling. Baseline workup per FDA labeling includes hepatitis B serologies (HBsAg and anti-HBc), complete blood count, immunoglobulin levels where indicated, and infection screen including tuberculosis. The FDA boxed warning covers fatal infusion reactions, severe mucocutaneous reactions, hepatitis B virus reactivation, and progressive multifocal leukoencephalopathy. Other important warnings include infusion reactions including fatal infusion reactions, severe mucocutaneous reactions, hepatitis B virus reactivation, and progressive multifocal leukoencephalopathy. Your specialist will discuss the risk-benefit profile and schedule monitoring before initiating therapy.

Is Rituxan legally importable into Oman?

Yes, through Oman Directorate General of Pharmaceutical Affairs and Drug Control (DGPADC) named-patient and personal-use import framework, coordinated with the treating facility's pharmacy. Oman has an established pathway for specialty medicines approved by reference authorities (US FDA, EMA, MHRA) but not stocked or registered for the specific indication locally.

The DGPADC named-patient route allows a Omani-licensed physician to request import of a medicine when: (a) the medicine is approved by a recognised reference authority, (b) no clinically equivalent locally registered alternative is suitable for the patient's indication and history, (c) the treating physician takes clinical responsibility for use, and (d) chain of custody is documented from the US source to the administering facility. Applications are typically filed through the dispensing institution's import pharmacy on the physician's behalf, with approval issued on a per-patient, per-cycle quantity basis.

How the pathway works, step by step

1. **Consultation with your treating specialist.** The prescribing decision is clinical. Your specialist documents the indication, prior therapies where relevant, and rationale for Rituxan.
2. **Baseline screening.** Hepatitis B serologies (HBsAg and anti-HBc), complete blood count, immunoglobulin levels where indicated, and infection screen including tuberculosis are confirmed and documented.
3. **DGPADC named-patient application.** Your specialist or the facility's import pharmacy files the application with clinical rationale, patient reference, product strength, quantity requested, and chain-of-custody plan.
4. **US-side sourcing.** Reserve Meds coordinates with our US-licensed specialty wholesale partner to secure product from Genentech and Biogen (Roche)'s authorised distribution under DSCSA chain-of-custody.
5. **Cold-chain shipment.** Rituxan requires refrigerated transport at 2 to 8 degrees Celsius. Shipments include temperature-monitored packaging with continuous loggers and tamper-evident seals.
6. **Arrival and first dose.** The dispensing pharmacy releases product against the physician's prescription, and your specialist initiates therapy.

What documentation your physician needs

Your physician will typically need to provide:

- A clinical rationale letter confirming diagnosis, prior therapies where relevant, and Rituxan as the indicated next step
- Verification of their Omani medical licence
- A patient identifier, anonymised reference where privacy is preferred
- Documented pre-treatment screening consistent with FDA labeling (see above)
- The planned dosing regimen (indication-specific dosing by intravenous infusion or, for Rituxan Hycela, subcutaneously after a first IV dose, per FDA labeling)
- A monitoring plan covering HBV screen, infusion-reaction premedication, and indication-specific dosing schedule

Reserve Meds provides a physician documentation kit tailored for CD20-directed monoclonal antibody therapies, including the templates DGPADC reviewers commonly request.

Typical costs and indicative timing

Reserve Meds gives you a drug-only reference range plus a transparent delivered quote at intake. As an illustrative composite case, the US cash-pay reference range for a single infusion (biosimilars often lower; full courses vary by indication) of Rituxan sits in an indicative 2026 band of approximately USD 4,500 to 8,000. International logistics, DGPADC documentation handling, cold-chain shipping, and concierge coordination add incremental cost. The delivered quote we issue at intake shows each line separately.

Indicative timing for first dose after cohort intake opens is approximately 2 to 5 weeks from the moment a complete application is submitted, assuming the documentation package is clean on first pass. Refills ship on a rolling cadence aligned to the dosing schedule.

Service availability is limited to our first cohort. All timelines are indicative, not guarantees.

Where Reserve Meds fits in

Reserve Meds is a US-based concierge coordinator for cross-border specialty medicine. For Rituxan specifically, we provide:

- **Sourcing.** Through our US-licensed specialty wholesale partner, operating under DSCSA chain-of-custody from manufacturer to export.
- **Documentation.** Regulatory package tailored for your physician and for DGPADC review, including CD20-directed monoclonal antibody class templates.
- **Cold-chain logistics.** Temperature-monitored, internationally tracked shipment to your named dispensing facility with continuous temperature loggers.
- **Concierge case lead.** A named point of contact for your family and your physician across the full case arc.

We are a coordinator. We are not the prescriber, not a pharmacy, and not a dispensing facility. All clinical decisions remain with your treating specialist, and dispensing sits with the licensed Omani pharmacy of record. Reserve Meds operates on cash-pay only and does not bill insurance.

Frequently asked

Is this legal in Oman? Yes, when executed through the DGPADC named-patient and personal-use framework with appropriate documentation, clinical rationale, and a licensed dispensing facility. The pathway is routinely used across oncology, rare disease, and immunology at Omani tertiary centers.

What about the boxed warning? The FDA boxed warning on Rituxan covers fatal infusion reactions, severe mucocutaneous reactions, hepatitis B virus reactivation, and progressive multifocal leukoencephalopathy. Your specialist performs the risk-benefit assessment, schedules monitoring, and counsels the patient per labeling. Reserve Meds does not make that clinical judgement, your physician does.

Will my private health insurance cover this? Cash-pay is the default posture. Some Omani private insurers reimburse named-patient imports on a case-by-case basis. We supply documentation for your submission but do not process insurance claims.

How does cold-chain affect timing? Rituxan ships refrigerated. We use validated packaging with continuous temperature monitoring, and arrival temperature data is logged on every shipment.

What if my physician has not filed a named-patient request before? Named-patient import is an institutional process most major Omani tertiary centers (Sultan Qaboos University Hospital (SQUH), Royal Hospital Muscat, and Oman Oncology Center) have encountered. Our documentation kit is written for first-time applicants and tracks what DGPADC reviewers commonly ask for.

Reserve Meds's role

US-based concierge coordinator for cross-border specialty medicine. We are not the prescriber, not the dispensing pharmacy, and not the manufacturer. All clinical decisions remain with your treating physician.
